Skills

SaaS & Architecture

Cloud-native design, APIs, scalable backends, product thinking

AI & LLMs

AI agents, RAG, vector stores, NLP, prompt engineering

Cloud / DevOps

AWS, GCP, Docker, Linux, CI and CD

Backend & Data

Python, Node.js, FastAPI, Redis, MongoDB, REST APIs

Publishing Systems

LaTeX, LuaTeX, TeX4ht, XML, XSLT, PDF, accessibility

Leadership

Mentoring, Scrum, RCA, delivery coordination

Certifications

GenAI/LLM Programme

TNQ Tech, 40 hours: LLMs, agents, embeddings, automation.

AI Credentials

LangGraph agents, Anthropic AI Fluency, Claude Code — Mar 2026.

Conferences

TUG 2025

In-person, Kerala, India — structure, language, accessibility, and TeX.

tug.org/tug2025

TUG 2026

Remote participation — Calgary programme on typography, publishing, tagged PDF.

tug.org/tug2026

Education

B.E. Electrical & Electronics

Kingston Engineering College, Vellore, Tamil Nadu.

Summary

Engineering Lead and SaaS Product Builder with 8+ years in **publishing technology**, building cloud-native automated typesetting platforms, AI-assisted content transformation systems, and workflow tools. Promoted to **Engineering Lead** at TNQ Tech in **April 2026**. Strong product mindset across feasibility analysis, user-story refinement, sprint flow, RCA, mentoring, and stakeholder-facing prototypes.

Career Evolution & Experience

- **Engineering Lead — Product, Prototyping & SaaS Automation** *Apr 2026 – Present*
TNQ Tech, Chennai, Tamil Nadu, India
 - Lead platform engineering for automated typesetting, SaaS delivery, GenAI demos, and stakeholder-facing prototypes
 - Coordinate product, production, QA, and engineering teams on ambiguous enterprise publishing workflow problems
 - Mentor engineers and production technologists; improve predictability through Scrum, Kanban, RCA, and workflow design
- **Software Engineer — Product & Prototyping** *Dec 2022 – Mar 2026*
TNQ Tech, Chennai, Tamil Nadu, India
 - Core contributor to **NeoPage**, a cloud-based automated typesetting SaaS platform reducing licensed-tool dependency
 - Achieved **2x performance improvement** via on-the-fly PDF pagination (10–30s vs. 60+s)
 - Built distributed content transformation services using Python, Node.js, FastAPI, Docker, AWS Lambda, and MongoDB
 - Built LLM demos and GenAI showcases to modernize legacy publishing pipelines
- **Team Lead** *Apr 2022 – Nov 2022*
Lapiz Digital Services, Ranipet, Tamil Nadu, India
 - Led a 35+ member production team across SLA-heavy publishing projects; managed delivery, QC, RCA, mentoring, workload planning, and automation-oriented improvements
- **Template Developer** *Apr 2021 – Mar 2022*
Integra Software Services, Puducherry, India
 - Developed LaTeX journal/book templates, pagination logic, reusable style components, and publisher-specific production workflows
- **LaTeX Production & Automation** *Sep 2017 – Mar 2021*
Lapiz Digital Services, Ranipet, Tamil Nadu, India
 - Progressed from Trainee to Technical Associate; built LaTeX macros, scripts, reusable tooling, and workflow standards
 - Achieved **4x productivity improvement**; handled complex pagination, revision cycles, and junior mentoring

Role Impact

Platform delivery: SaaS publishing workflows, automated typesetting, and stakeholder-facing prototypes.

Operational lift: workflow design, RCA, sprint rhythm, mentoring, and reusable production tooling.

Document engineering: TeX, XML, PDF generation, browser pagination, and accessibility-aware publishing systems.

Selected Projects

NeoView — PDF Viewer for Technical Workflows Python, PySide6, PyMuPDF · Website Technical PDF viewer for font inspection, measurement, crop/export, annotations, and review-heavy publishing workflows.	2026
authpack — LuaLaTeX Author Management LuaLaTeX · GitHub Author-affiliation tooling with ORCID support and flexible scholarly publishing layouts.	2025
enumsb — CTAN LaTeX Package CTAN · Contributor Profile CTAN package for inline sublists and consistent enumeration alignment.	2025
GenAI-Powered Editorial Assistant Streamlit, GenAI, NLP · GitHub Capstone project that reads, interprets, and drafts responses to emails using NLP and sentiment analysis with a Streamlit UI and containerized backend.	2025
Browser-Powered Pagination TeX, Lua, Emscripten, WebAssembly Custom browser pagination engine that runs TeX/Lua through WebAssembly for full pagination functionality without a desktop publishing dependency.	2024
Support ChatBot Level 1 support automation for production-team query handling. Helped production users answer repeated workflow queries faster and keep support knowledge closer to daily operations.	2023

Professional Focus

I work best on systems where publishing rules, human review, and automation must meet: SaaS editorial platforms, PDF workflows, LaTeX infrastructure, AI-assisted content operations, and practical tools for production teams. Current interests include tagged and accessible PDF, browser-native pagination, agentic editorial assistance, and scalable document transformation pipelines.

Project Impact Highlights

Publishing automation: reusable systems for pagination, content transformation, template logic, and review support. **Performance:** improved PDF responsiveness from 60+ seconds to 10–30 seconds. **AI prototyping:** GenAI demos around sentiment, response drafting, retrieval, and agentic support. **Team enablement:** support tooling, reusable LaTeX components, and technical handoff material.

Engineering Toolkit

Application: Python, Node.js, FastAPI, Streamlit, REST APIs, Redis, MongoDB.
Cloud & Delivery: AWS Lambda, Docker, Linux, CI/CD workflows, feasibility analysis, MVP scoping.
Publishing: LaTeX, LuaLaTeX, LuaTeX, TeX4ht, XML, XSLT, PDF generation, accessibility tagging concepts.
AI: LLM agents, LangGraph learning, RAG, embeddings, vector search, NLP, prompt engineering.

Community & Learning

CTAN contributor through **enumsb**; continued open-source publishing-tool experiments through GitHub. Attended **TUG 2025** in person in Kerala; following **TUG 2026** remotely for accessible PDF, typography, and TeX ecosystem updates. Completed TNQ Tech GenAI/LLM programme and March 2026 AI credentials.

Working Style

Start with real production constraints: exception cases, review points, file formats, and quality gates. Turn unclear ideas into demos, feasibility notes, user stories, and MVP slices teams can evaluate together. Current direction: accessible/tagged PDF automation, browser-native TeX workflows, and agentic tools that support editors and production teams.
